Abstract (en)  
[origin: CA3165222A1] The invention relates to an anchor rail (1) for fixing fasteners (20), comprising a first rail part (2a) and a second rail part (2b), which are connected to each other and on each of which anchor flanges (3) are formed, wherein a channel-like receptacle (13) for a head section (21) of a fastener (20) is formed between a first wall (8a) of the first rail part (2a) and a second wall (8b) of the second rail part (2b), and an inwardly protruding flange (10) is provided on the first wall (8a), and an inwardly protruding flange (10) is provided on the second wall (8b), and the inwardly protruding flanges (10) cover the edges of the channel-like receptacle (13), wherein an outwardly protruding supporting flange (12) opposite the inwardly protruding flange (10) projects from at least some sections of the first wall (8a) and/or the second wall (8b). The invention also relates to a method for producing an anchor rail (1) which can absorb particularly large forces.
