Abstract (en)

[origin: WO2021099485A1] The key includes a mechanical coding part (10), which comprises inner cavities (20) defining a coding of the key. The inner cavities are limited by boundaries defined by walls made in one piece. The walls enclose the inner cavities such that the boundaries are invisible from outside, A lock configured to be used in combination with the key comprises at least one first sensor configured to detect the inner cavities of the key to determine the coding of the key and a comparator for comparing the determined coding with stored coding information to determine whether the determined coding is authorized or not.
