Abstract (en)  
[origin: WO2021101391A1] A grounding system for a concrete structure (9) is described, the grounding system comprising a mounting element (5) and a grounding device (1), the grounding device (1) comprising: i) an electrically conductive mounting bracket (10) with a first coupling face (100) for the mounting element (5) and at least one cast-in portion (12) for casting into the concrete structure (9); and ii) an electrically conductive grounding element (2) which, in a first end portion (22), is attached in an electrically conductive manner to a second coupling face (102) of the mounting bracket (10) via a screw connection (31) and, in a fixing portion (21), is arranged for electrically conductive coupling to a reinforcing element (91) of the concrete structure (9), the grounding element (2) and the second coupling face (102) being arranged to be covered by the concrete structure (9), the mounting element (5) being attached in an electrically conductive manner to the mounting bracket (10). A method for arranging the grounding device (1) in the concrete structure (9) is described as well.
