Abstract (en)

[origin: WO2021230828A1] The invention relates to an ignition device for the gas cooker comprising an insulation body (10) an insulation body (10) selected from electrical insulating material arranged to confine an inner chamber (14) between a mounting wall (12) and an opposite outer wall (15) and a transformer 20 to be secured to the inner chamber 14. The ignition device further comprises a mounting element (30) is engaging in a narrowed holding aperture (56) at the periphery of a mounting opening (54) of the adjacent mounting plate (50) when moving radially outwardly through the mounting opening (54) in a locking position to suspend the insulation body (10) and protrudes outwardly from the mounting wall (12).
