Abstract (en)

[origin: WO2021099115A1] The present invention relates to a fume extractor device comprising at least one vapour conduction panel (3) and at least one illumination device (4). The fume extractor device (1) is characterized in that the vapour conduction panel (3) represents a light guide, the illumination device (4) comprises a housing (40) for at least one light source (430), which housing consists, at least in certain regions, of a transparent material, at least one part of the illumination device (4), which part consists of transparent material, faces the vapour conduction panel (3), and at least one part of an edge (30) of the vapour conduction panel (3), which faces the illumination device (4), has light-scattering properties.
