Abstract (en)
[origin: WO2021099041A1] The invention relates to a device for fastening a bracelet to a watch casing (60), comprising: - a terminal body (10A; 10B) of the bracelet, - at least one mobile fastening element (20) comprising a pivot portion (21) and mounted within the terminal body (10A; 10B) so as to be movable between an engagement position in which the pivot portion (21) is arranged to engage with the casing (60), for example in a bore in a lug of the casing (60), and a retracted position, in which the pivoting portion (21) is arranged so as to disengage from the casing (60) so as to be able to release the terminal body (10A; 10B) from the casing (60), - a lever (30; 30B; 30C), movably mounted in rotation on the terminal body (10A; 10B), - at least one movable cam (22) engaged with the lever (30; 30B; 30C) in order to cause the movable fastening element (20) to pass from the engagement position toward the retracted position during a rotation of the lever (30; 30B; 30C), characterized: - in that the device comprises at least one static cam (40) fixedly mounted on the terminal body (10A; 10B) opposite the movable cam (22) in order to impose an axial movement on the movable cam (22) during its rotation, - and in that the movable cam (22) is formed directly on the movable fastening element (20), and arranged between the lever (30; 30B; 30C) and the static cam (40).
