Abstract (en)  
[origin: EP4062773A1] The present invention relates to a pouched product (201) for oral use, which comprises a portion of a filling material (202) and a pouch (204) enclosing the filling material. The pouch has a generally rectangular shape with a first pair of opposing side edges (203a, 203b) and a second pair of opposing side edges (205a, 205b). The pouch is formed from a piece of packaging material, which is saliva-permeable and has a pair of opposing side edges. The pouch comprises two seals (209a, 209b) only, each seal being located at or adjacent to a corresponding one of the second pair of opposing side edges of the pouch. A first edge portion (213a) of the piece of packaging material is arranged in an overlap with another portion (213b) of the piece of packaging material, a major part of the overlapping portions of the piece of packaging material being connected only by surface friction. The present invention further relates to a method for manufacturing a pouched product for oral use.
