Abstract (en)
The present invention relates to a method for providing a wood-based load-bearing panel (113.1, 114.1, 115.1) for use in the assembling of a construction system (100), wherein a position is allocated to the panel, a panel template is provided, at least one variation of the panel template is determined based on a variation of parameters so that the load-bearing capacity of the variation is comprised between 1 and 4 times the required vertical force that the variation must bear at the position of the panel, then a variation is selected, and the panel is manufactured from the selected variation. The invention also relates to a wood-based load-bearing panel (115.1) obtainable with such method, and to a construction system (100) including such panel (115.1).
