Abstract (en)
The invention relates to a symmetrical strike for multipoint locks, which have a front portion provided with a recess (21) for receiving a latch of the lock and through holes (22a, 22b) in bolts of the multipoint lock, close to any one of the sides of the recess (21). The box of the strike is provided with two symmetrical sides (11a, 11b) with respect to a median plane (Y) of the box (11) and of the latch (12); said symmetrical sides (11a, 11b) are arranged between the through holes (22a, 22b) in the bolts, located on any one of the two sides, or on the two sides of the recess (21) of the front portion (2, 2a) of the lock, and the corresponding side of said recess of the front portion. The strike comprises a lever system and a terminal block assembly carrying a drive coil, which are adapted to the strike.
