Abstract (en)

[origin: WO2021105295A1] A computer implemented method is provided for controlling operation of an aerosol generation device. In the method, the aerosol generation device receives a context message comprising contextual data about one or more contextual parameters relating to the present context of the aerosol generation device (S601). The aerosol generation device determines, whether an operation of the aerosol generation device is to be disabled, wherein the determination is at least partially based on the received contextual data (S604). In case the determination is affirmative, the operation of the aerosol generation device is disabled (S605).
