Abstract (en)

[origin: WO2021107962A1] This invention relates to devices that adjust the fit of a garment. Previously, conventional clothing did not include adjustable fasteners to provide for adjustments, such as fine tune adjustments, to the clothing. Embodiments of the present invention use a monorail track with a plurality of rail teeth spaced along a length thereof. A rail carriage is slidably engaged with the monorail track. A button is operatively attached to the rail carriage. At least one of the rail carriage and the button includes a locking device to removably engage with the plurality of track teeth.
