Abstract (en)
[origin: WO2021108695A1] An improved carrying article having a collapsible external compartment 14 is disclosed. The carrying article includes a body 12 defining a main compartment 13, a pocket 16 located at the lower end of an exterior wall 18 of the main compartment, the pocket having a pocket wall 46 and a pocket opening 48. The collapsible external compartment is stored in the pocket and is movable between a first position in which the collapsible external compartment is tucked within the pocket and a second position in which the collapsible external compartment is accessible outside of the pocket. The collapsible external compartment has at least one fastener 63 configured to secure a second end of the collapsible external compartment to an external surface of the carrying article near an upper end of the body such that the collapsible external compartment when secured to the main compartment in the second position provides an external compartment.
