Abstract (en)

[origin: WO2021105211A1] The invention relates to a device for autonomously monitoring a level crossing, the level crossing forming an intersection between a rail first way and a second way. The monitoring device comprises: - a video-recording unit comprising at least three monitoring units, each of the monitoring units being equipped with a visible camera and an infrared camera, - a digital processing unit configured to receive and process in real-time sequences of video recording delivered by the video-recording unit, and - a warning unit configured to trigger warnings of a risk of a collision involving a rail vehicle moving over the railway.
