Abstract (en)
[origin: WO2021107773A1] The present invention relates to a ship, comprising: - a propeller that is driveably connected to a drive; - a rudder system arranged downstream of the propeller and comprising a pair of rudders arranged on opposite sides relative to a water flow induced by the propeller and configured to jointly deflect the water flow induced by the propeller; - wherein each rudder of the pair of rudders comprises two flaps that are pivotable relative to each other between a forward sailing state and a reversing state; and - wherein, in the reversing state, said flaps are oriented to define a scoop shape of the rudders to deflect and reverse the water flow.
