Abstract (en)

[origin: WO2021104747A1] The invention relates to an apparatus for treating fibrous material, which apparatus has a housing (5) in which a plurality of treatment tools (1, 2, 3, 4) of rotationally symmetrical shape are arranged coaxially to one another, and in each case two treatment tools (1, 2) delimit a treatment gap (7, 8) through which the fibrous material runs, at least one of said treatment tools (1, 2) rotating about a common axis (6). The range of possible uses of the device can be extended by designing this device as required having one or more treatment gaps (7, 8).
