Abstract (en)

[origin: WO2021104903A1] The invention relates to a door for a garage, hall, and the like, comprising a closure system for opening and closing the door opening by means of lamellae which can be vertically moved in the opening by at least one drive train and which close the opening when arranged one over the other, wherein at the lowest position of each lamellae during a lowering process for opening the door, the lamellae can be transferred into a floor storage area, which is preferably arranged underground, transversely to the lowering direction, in particular perpendicularly to the lowering direction, in the floor region.
