Abstract (en)  
[origin: WO2021104748A1] The invention relates to a method for operating a plain bearing; with the steps of determining of a first rotational speed, at which a transition of the lubrication state takes place, or at which the friction in the plain bearing is at a minimum; comparing of the first rotational speed with a threshold value; and, if the rotational speed has exceeded the threshold value, operation of the bearing in such a way that a self-repairing wear effect is produced.
