Abstract (en)

[origin: WO2021105058A1] The present invention relates to an optical element (10) of a vehicle light module, the light module comprising at least one light source, the rays emitted from which pass through a transparent optical surface (20) of the optical element (10) and emerge in the form of a light beam, the transparent optical surface (20) extending mainly along a transverse axis (A) between a first transverse end (19) and a second transverse end (21), characterized in that the optical element (10) comprises at least one means for attachment (22, 24) to the light module at each of the transverse ends (19, 21) of the transparent optical surface (20).
