Abstract (en)
[origin: WO2021025635A2] The invention relates to a holding assembly (40) for a pan support of a gas hob comprising a holding element (41) that has an intermediate channel (413), adapted to being fit at least one support arm (32) of a grate (30) elevated at a vicinity of a burner (20) provided at a top plate (12) of a gas hob (10) in a surrounding manner wherein the support arm (32) is extending towards the burner (20) and a support element (42) at least partly surrounding the burner (20) from above such that hold a curved outer section (52) of a pan (50). A channel width (w1) of the intermediate channel (413) is adjusted wider from the support arm (32) for a single arm use position of the holding element (41) and the width of the corresponding outer periphery of the holding element (41) is adjusted narrower than an arm distance (w2) between two adjacent inner walls (351, 352) of a fork part (35) of the support arm (32) for a double arm use position.
