Abstract (en)
[origin: WO2021104851A1] In order to provide a generic system with improved characteristics in terms of operating comfort, a household appliance system (10a) is proposed comprising at least one control unit (12a), which is provided such that, in an operating state, it at least partially automatically checks whether an external unit (14a) is arranged in an operating region (18a) for an operation of at least one household appliance (16a), and if the external unit (14a) is arranged within the operating region (18a), it enables the operation of the household appliance (16a) via the external unit. (14a).
