Abstract (en)

[origin: WO2021104908A1] The invention relates to an accessory part (30) for a laser receiver for transferring a laser line to a working surface, comprising a base plate (35) having a front side and a rear side with which the accessory part (30) can be arranged on the working surface, a connection device (36) for connecting the laser receiver to the accessory part (30), and a revolute joint (37) which is arranged between the base plate (35) and the connection device (36), wherein the connection device (36) can be rotated about a rotational axis (39) relative to the base plate (35) between a first angle and a second angle.
