Abstract (en)

[origin: WO2021105640A1] The invention relates to a method for identifying a microorganism to be identified, said method comprising the following steps: obtaining an excitation-emission matrix EEM of the microorganism to be identified; analyzing the main components of said EEM matrix using at least one reference EEMr matrix; projecting the result of the analysis onto a plane defined by two main components; and identifying the microorganism to be identified.
