Abstract (en)

[origin: WO2021104753A1] The invention relates to a method (400) for calibrating the control of an electrical machine (120) for a specifiable torque value (T_{Des}), the electrical machine (120) being operated by means of field-oriented control. The method comprises the steps of: a.) specifying a current vector ($I_{x,V}$) (410) for producing the specifiable torque value (T_{Des}) by means of a connectable electrical machine (120), b.) specifying a test signal ($S_{x,Test}$) (420) and superimposing the test signal ($S_{x,Test}$) on the current vector ($I_{x,V}$), c.) capturing (430), by means of a sensor (130), a response signal ($S_{x,Antw}$) resulting from the superimposing, e.) determining (450) a calibrated current vector ($I_{V,k}$) according to the evaluation of the response signal ($S_{x,Antw}$).
