Abstract (en)

[origin: WO2021104904A1] The present invention relates to a module-prioritization method (1; 10) for a redundant set of modules (21) of a hardware system (20), comprising: determining a reliability of at least one module of the redundant set of modules (21), the reliability being determined on the basis of a learning algorithm, in order to prioritize activation of a module of the redundant set of modules (21).
