Abstract (en)
[origin: WO2021104929A1] The invention relates to an electric connection terminal (100) for connecting an electric conductor, comprising a housing (110), a clamping spring (120) which is arranged in the housing (110), a current bar (160), and a clamping lever (140), wherein the clamping spring (120) has a contact limb (121) in order to clamp an electric conductor to be connected against the current bar (160) in a spring-elastic manner, wherein the clamping lever (140) is secured to the housing (110) and can be pivoted about a pivot axis (141) between an open position and a closed position, and the clamping lever (140) has a driver (142) which is paired with a tab (122) of the clamping spring (120), said tab being provided on the contact limb (121) of the clamping spring (120).
