Abstract (en)
[origin: WO2021104849A1] The invention relates to a household appliance system (10a-d), in particular a cooking system, comprising at least one household appliance (12a-d) having at least one first induction unit (14a-d), which is provided for inductively providing energy, and comprising at least one household unit (16a-d) having at least one second induction unit (18a-d) which is provided for inductively receiving the provided energy. In order to provide a generic system with improved characteristics in terms of safety, the household appliance system (10a-d) has at least one safety unit (20a-d) which is provided to at least partially prevent a transmission of energy to the second induction unit (18a-d) according to at least one safety parameter.
