Abstract (en)

[origin: WO2021105617A1] The assistance method according to the invention is carried out by a device (3) which manages the resources of a computer domain (2), said resources being protected by a plurality of protection services against cyber attacks, said method comprising: - a step of determining an inability of a first protection service, among the plurality of protection services, to handle a cyber attack targeting at least one resource in the computer domain; - a step of developing a mitigation plan for the attack from a mitigation plan obtained from a second protection service among the plurality of protection services or using assistance provided by at least the second protection service; and - a step of transmitting the developed mitigation plan to the first protection service to handle the attack.
