Abstract (en)

Provided is a production method for a tobacco material in which the method can provide, in a short processing time, a tobacco material having low moisture content and high strength. The production method for a tobacco material, includes a step of drying a tobacco raw material by treating the tobacco raw material in a liquid compound in a reduced pressure environment, thereby producing a tobacco material, where the liquid compound has a boiling point at 1 atm of 180°C or higher.
