Abstract (en)

There is provided a flavor source container (10) that is attached to a non-combustion type suction device (1) and accommodates a flavor source, the flavor source container including an inflow port into which an aerosol generated by an atomizer included in the non-combustion type suction device flows and a suction port through which the aerosol is suctioned and flows out, in which the inflow port is formed to at least partially include a region angled with respect to the suction port.
