Abstract (en)

[origin: EP4067085A1] Provided is an aqueous inkjet ink with which the granularity of an ink coating caused in printing on a less-ink-absorbent or non-ink-absorbent recording medium is reduced while sufficient image fastness is achieved even in printing on an ink-absorbent recording medium. The present invention relates to an aqueous ink composition for use in an inkjet recording method. The aqueous ink composition contains an aqueous medium, a pigment, and a dye, and a combination of the pigment and the dye is a predetermined combination.
