Abstract (en)  
A steering device includes: an inner tube (1) including a steering wheel; a column housing that houses the tube (1) retractably along an axis (X); a drive mechanism (K) attached to the column housing so as to cause the tube (1) to perform a retraction operation via a drive member (4, 5) reciprocating along the axis (X); a first impact absorption member (3) that is provided on one of the drive member (4, 5) and the tube (1), and includes a deformation portion (32); and an action member (7) that is provided on another, and plastically deforms the deformation portion (32). The drive member (4, 5), the first impact absorption member (3), and the action member (7) are fixed by a single fixing member (6). When a predetermined pushing load acts on the tube (1), fixing between the first impact absorption member (3) and the action member (7) is released.
