Abstract (en)

A container (100) moveable, when squeezed, between a flat first configuration and a second configuration providing a volume therewithin to receive an item comprises: first and second faces joined at first and second opposing sides, and at third and fourth opposing sides; a slit (122) extending across the second face, a slit apex being closer to the fourth side than end-points of the slit are; a first line of weakness on the second face, extending away from the slit towards the third side; a second line of weakness (2) on the first face, extending from the fourth side, wherein the first and second lines are straight, parallel to the first and second sides, and aligned with the slit apex; and a third line of weakness on the first face, having end-points by the fourth side, and extending away from that side therebetween, further than the slit. The faces bend along the lines of weakness in the second configuration.
