Abstract (en)  
[origin: CN115142186A] The invention relates to a knitting tool bar (1), comprising: a main body (2) having a longitudinal direction (3); the invention relates to a knitting machine (1) comprising a main body (2) having a longitudinal direction (3), and a knitting tool receptacle fixed to a contact surface (5) of the main body (2), the knitting tool receptacle having a plurality of segments separated from one another, the contact surface (5) having, for each segment, a transverse profile (6) running transversely to the longitudinal direction (3), and each segment having a mating transverse profile cooperating with the transverse profile. It is expected that high productivity can be achieved with a warp knitting machine having such a knitting tool bar. For this purpose, a longitudinal profile (8) extending in the longitudinal direction (3) is provided in the contact surface (5), and at least one section has a mating longitudinal profile which interacts with the longitudinal profile (8).
