Abstract (en)

[origin: WO2021110541A1] There is provided an aerosol-generating article (10; 100; 310) for producing an inhalable aerosol upon heating, the aerosol-generating article comprising: a rod of aerosol-generating substrate (12; 114; 312); a hollow tube segment (14; 120; 320) comprising fibrous filtration material, the hollow tube segment (14; 120; 320) arranged downstream of the rod (12; 114; 312) and in longitudinal alignment with the rod (12; 114; 312); wherein the fibrous filtration material comprises fibres comprising a polyhydroxyalkanoate (PHA) polymer or copolymer.
