Abstract (en)  
[origin: WO2021110888A1] The invention relates to formwork (1) for producing a concrete element (2), in particular a wall element or ceiling element, having an opening (7), in particular a window opening or door opening, the formwork comprising: a formwork panel (3); opening formwork (6), which has a frame element (8) for delimiting a portion of the opening (7), a support bracket (9) for supporting the frame element (8), and a mounting element (10) for mounting the support bracket (9); a formwork-stripping device (11) for transferring the opening formwork from a formwork position for the formation of the opening (7) into a formwork-stripping position for the release of the concrete element (2), wherein the formwork-stripping device (11) has a sliding and tilting mechanism (12) for sliding the frame element (8) in a direction (13) parallel to the formwork panel (3) and for tilting the frame element (8) about a pivot axis running substantially parallel to the formwork panel (3).
