Abstract (en)
[origin: CA3160326A1] The invention provides a sealing profile (1) for embedding into a moulded part (50) of curable material, in which the risk of spalling on the moulded part (50) is reduced. The sealing profile according to the invention (1) has a profile body (2), with a profile base (3) to be embedded within the moulded part (50), which, after embedding the sealing profile (1), comprises a profile base face (5) that faces the moulded part (50); and lateral profile base flanks (7), and a profile back (4) projecting from the profile base (3) which comprises a profile-back face (6) opposite the profile base face (5), and lateral profile-back flanks (8), and wherein, the sealing profile (1) comprises at least one anchoring foot (9) projecting away from the profile base face (5), and the profile base flanks (7) merge into the profile base face (5) with rounded portions (10) or chamfers (21).
