Abstract (en)

[origin: WO2021110676A1] The invention relates to a system (100) for checking the operating state of a component on a vehicle (5), in particular a utility vehicle, comprising: - a detection device (10) which detects information in the form of a data set in a defined region on the vehicle, said defined region comprising the component to be checked, and - an analysis device (20) which is provided with the data set, wherein the analysis device (20) is configured so as to ascertain the operating state of the component using the detected data set, and the detection device (10) is arranged outside the vehicle (5).
