Abstract (en)

[origin: WO2021110683A1] The invention relates to a system (100) and a method for checking the state of at least one component on a vehicle (5), in particular a utility vehicle, comprising: - a detection device (10) which detects information in the form of a data set in a defined region on the vehicle, said defined region comprising the at least one component to be checked, and - an analysis device (20) which is provided with the data set, wherein the analysis device (20) is configured so as to ascertain the state of the at least one component using the detected data set, and the detection device (10) is secured to the vehicle (5) and/or is carried by the vehicle (5) at least temporarily.
