Abstract (en)
[origin: EP4071294A1] An iron with power cord winded up includes a main body and an electric heater arranged inside the main body. The electric heater is connected with a power cord extending out of the main body, an outer surface of an upper portion of the main body is depressed inward to form a handle portion, the power cord can be winded around the handle portion, an engagement part is provided around an outer periphery of the main body, an engagement counterpart is engaged with the engagement part, and the power cord is detachably fastened by the engagement counterpart. The engagement counterpart can be driven to move relative to the engagement part to change a position where the power cord is to be fastened by the engagement counterpart.
