Abstract (en)
[origin: US2022316215A1] The drainage device 10 comprises: a drainage head 24 internally delimiting a collection space 34 and provided with at least one through recovery passage 36, 38, an attachment sleeve 26 at least partially deformable, secured to the drainage 24 and capable of being engaged inside the flow pipe 20, a compression washer 28 attached on the attachment sleeve 26, and a stressing element 30 movable in relation to the drainage head 24 and cooperating with the compression washer 28 to obtain, under the effect of a movement of said stressing element relative to the drainage head, an axial movement of the compression washer 28 on the side of the drainage head and an outward radial deformation of the attachment sleeve 26.
