Abstract (en)  
An adjustable stopper assembly for a vehicle door or hood, comprises: a base part comprising a body and attachment means for securing in an aperture in the body of the vehicle; a pin part comprising a head portion and a shank extending from the head portion; and an intermediate part located between the base part and the head portion of the pin part and being releasably securable to the base part: wherein: the shank of the pin part comprises at least one first, resiliently deformable outwardly-extending projection at a first longitudinal position of the shank, at least one second, resiliently deformable outwardly-extending projection at a second longitudinal position of the shank spaced from the first projection in the longitudinal direction of the shank and a screw-threaded portion between the at least one first, resiliently deformable projection and the head portion of the pin; the intermediate part comprises a screw-threaded through aperture which is screw-threadedly engaged with the screw-thread portion of the pin shank; and the base part comprises a recess in which the at least one second, resiliently deformable projection of the shank is received, the recess having one or more inwardly-extended projections which are engageable with the at least one second resiliently deformable projection as the pin part is rotated.
