Abstract (en)

[origin: EP4071775A1] The present invention relates to a reactor for reducing harmonics, and more specifically, a reactor for reducing harmonics that is capable of providing a structure of a bobbin wherein one end of a coil is spaced apart from the other end of the coil, while the coil is being wound compactly around a limited space of the bobbin, thereby ensuring high L and resistance values even in an appropriate size thereof to satisfy the Class D European standards.
