Abstract (en)
[origin: WO2021116136A1] The invention relates to an implant (1) for treating bones, in particular for covering defects or drill holes or for reconstructing bone defects or malformations. The implant comprises at least one frame structure (2) and at least one adaptation region (3). The edge of the implant (4) is partly, but not continuously, formed by the frame structures (2) that are outside the adaptation region (3).
