Abstract (en)

[origin: WO2022127983A1] The invention relates to an assembly for providing medical care to a patient. The assembly comprises a total quantity of supply connections (22.1, 30.1), a frame (20), at least one wall panel (11.1, 11.4) which can be mounted so as to be detachable, and a wall panel fastening unit for each detachably mountable wall panel (11.1, 11.4). Each detachably mountable wall panel (11.1, 11.4) can be detachably fastened on the frame (20). The total quantity of supply connections (22.1, 30.1) provides those supply media that the medical devices need altogether for intensive care. When the detachably mountable wall panels (11.1, 11.4) are fastened on the frame (20), a remaining quantity of supply connections (22.1) remain free. This remaining quantity may supply those medical devices that are needed for normal care.
