Abstract (en)

[origin: CA3155033A1] The present invention relates to a cartridge (10) for a dispensing device, the cartridge having at least one inherently non-rigid, elongate film pouch (18), which has a chamber (20) for receiving a composition, having a head part (12) for interacting with the film pouch (18) and having an inherently rigid insert (16), the insert being connected to the film pouch (18) on a side facing the head part (12). A connecting device (200) is provided, by means of which the insert (16) can be connected to the head part (12) in a form-fitting and/or force-fitting manner, the insert (16) having at least one first connecting element (201) of the connecting device (200) and the head part (12) having at least one second connecting element (202) of the connecting device (200).
