Abstract (en)

[origin: WO2021115740A1] The invention relates to a method for producing a membrane (101a) for an ultrasonic sensor. First, a membrane body (100) consisting of a metal material is provided. Then, an outer surface region (106) of the membrane body (100) is degreased. Subsequently, the outer surface region (106) of the membrane body (100) is pickled. In order to pre-activate a subsequently applied second passivation layer (110), a first passivation layer (105) is also deposited, as a first layer, on the outer surface region (106).
