Abstract (en)  
[origin: WO2021173092A1] The invention relates to the assist system (100) used for the trailers which are manufactured with respect to the load to be carried comprising the 1st axle (220), the 2nd axle (221) and the 3rd axle (222) to perform the turning motion within their turning circle (R), wherein the semi-trailer comprises the load control valve (105) which, by adjusting the axle which utilizes the pressurized air within the 1st axle left air bag (1081), the 1st axle right air bag (1082), the 2nd axle left air bag (1071), the 2nd axle right air bag (1072), the 3rd axle left air bag (1061) and the 3rd axle right air bag (1062) of the vehicle (A) with respect to the load capacity that it will carry, it controls whether it is within the value limits; and pressurized air measuring device (103) which transfers the measured data via the air bag pressure measurement line (104) to the controller (102) and which measures the pressure of the pressurized airline that the 3rd axle left air bag (1061) is connected thereto.
