Abstract (en)
[origin: WO2021116604A1] The invention relates to an apparatus comprising: a cell (100) delimited by two sides (111, 112) facing one another and an abutment (113), movable so as to crush the brick (B) inside the cell (100), starting by crushing the end (E1) nearest the abutment (113) in order to compress and push its contents towards the other end (E2), and break it up, and a drive means (300) for the relative movement of the two sides (111, 112) and a movement means (400) for moving the cell (100).
