Abstract (en)  
[origin: WO2021115738A1] A domestic refrigeration appliance (1) having a heat-insulated housing (2), in which is formed at least one accommodating space (7) for food and refrigeration components, said accommodating space being delimited by an inner container (3) which is arranged in the housing (2), between the accommodating space (7) and a thermal insulation (10), wherein on a wall surface (16) of the inner container (3), said wall surface being directed towards the accommodating space (7), the accommodating space (7) has arranged on it a freely suspended finned-tube evaporator (50) for cooling the accommodating space (7), the finned-tube evaporator (50) comprises a serpentine refrigerant-tube coil (501), which carries refrigerant during operation of the domestic refrigeration appliance (1) and has a multiplicity of straight refrigerant-tube sections (503), each connected to one another by curved refrigerant-tube sections (504), wherein the straight refrigerant-tube sections (503) have radially projecting fins (505) along their longitudinal extent, wherein the finned-tube evaporator (50) is of flat construction and the straight refrigerant-tube sections (503) are arranged substantially continuously one beside the other along the wall surface (16) of the accommodating space (7).
