Abstract (en)  
[origin: CA3162936A1] The invention relates to a device (7) for generating test data for testing a distance determination in an optical time-of-flight measurement, comprising: a test pattern generator (8) that is designed to generate a time sequence of test events in order to provide them to a test histogram channel (10) for generating time-correlated test histogram data for testing the distance determination in the optical time-of-flight measurement.
